

ABSTRACT

A portable safety rail arrangement is sized to be selectively mounted and removed
5 from a flatbed trailer. A flatbed trailer includes a deck and at least one safety rail
arrangement that is selectively mountable and removable from the trailer. In certain
preferred implementations, there are a plurality of safety rail arrangements provided for
the flatbed trailer, which can be arranged to form a continuous fence around the perimeter
of the trailer. A method for providing a safety arrangement for a flatbed trailer includes
10 mounting a single-piece safety rail onto the trailer.
